About

I'm a **student developer** who enjoys building practical, clean, and meaningful software solutions. I work with Python, JavaScript, HTML, CSS, SQL, and a growing set of modern tools that help me turn ideas into fully functional projects. I focus on writing code that's organized, readable, and efficient, whether I'm designing interfaces, building back-end logic, or structuring databases.

I'm constantly learning and improving—experimenting with new frameworks, refining my coding habits, and exploring better ways to solve real problems through technology. Every project I build is an opportunity to deepen my understanding of development, improve my workflow, and shape the way I think as a programmer.

As I continue growing in the field, my goal is to develop software that's not only useful but also intuitive and reliable. I'm driven by curiosity, creativity, and the desire to bring ideas to life through well-crafted, high-quality code.

Experience

Work Immersion Student

Municipal Environment and Natural Resources Office (MENRO) – Buhi, Camarines Sur

10-Day Deployment | March – May S.Y. 2023–2024

Student Employment Program

Sangguniang Bayan Office – Municipality of Buhi

10-Day Deployment | June 2025

Tech-Stacks

Front-End

HTML, CSS, Javascript

Back-End

Python, MySQL
